Advances in Pediatric Research Open Access Journal

Estimates of PAP based on echocardiographic measurements of tricuspid regurgitation jet velocity have indicated that approximately 30% of patients with sickle-cell disease have PH. 10,11 However, catheter-based data indicated that almost half of the patients with PH had elevated pulmonary venous pressure or hyperkinetic states that resulted in elevated PAP with normal pulmonary vascular resistance (PVR). 10 A recent study of 50 pediatric patients with sickle-cell disease used Doppler ...

Advances in the Management of Pediatric Pulmonary ...

Abstract. As our understanding of the pathogenesis of PAH evolves, newer strategies for its treatment are being developed and implemented. Based on studies with adult PPH patients, anticoagulation is now regarded as a mainstay of therapy and is associated with prolonged survival. Before the era of vasodilator therapy, which began in the late 1970s, most children with PPH died within 1 year of diagnosis.
