Use the download link to download the file to your computer. If the book opens in your web browser instead of saving to your computer, right-click the download link instead, and choose to save the file.

Band Interleaved By Line Bil

Band interleaved by line (BIL) is one of three primary methods for encoding image data for multiband raster images in the geospatial domain, such as images obtained from satellites. BIL is not in itself an image format, but is a scheme for storing the actual pixel values of an image in a file band by band for each line, or row, of the image.

Band Interleaved by Line (BIL) Image Encoding

Full name. Band Interleaved by Line (BIL) Image File. Description. A binary raster file format for aerial photography, satellite imagery, and spectral data. The BIP data organization can handle any number of bands, and thus accommodates black and white, grayscale, pseudocolor, true color, and multi-spectral image data.

BIL, BIP, and BSQ raster files. Image description files. Band interleaved by line (BIL), band interleaved by pixel (BIP), and band sequential (BSQ) are three common methods of organizing image data for multiband images. BIL, BIP, and BSQ are not in themselves image formats but are schemes for storing the actual pixel values of an image in a file. These files support the display of single and multiband images and handle black-and-white, grayscale, pseudo color, true color, and multispectral ...
