The VW 2.0L 8V is an interference engine (a.k.a. non-clearance engine). If the VW timing belt fails, the timing belt system that links the cylinder head, camshaft, and crankshaft no longer run in sync. Close tolerance engine designs allow for the cylinder head valves to hit the top side of the pistons. VW timing belt failure on these engines usually results in catastrophic engine damage (i.e. bent valves and in some cases cracked pistons).
