Unlike games, or entertainment, where VR is more or less bound to happen, a functional virtual reality web is a complex ecosystem. While individual sites could offer an interactive virtual reality version to differentiate themselves from the crowd, the plethora of sites available on the internet will still limit to a 2D version floating in a 3D environment.

Unlike real reality (the actual world in which we live), virtual reality means simulating bits of our world (or completely imaginary worlds) using high-performance computers and sensory equipment, like headsets and gloves. Apart from games and entertainment, it's long been used for training airline pilots and surgeons and for helping scientists to figure out complex problems such as the structure of protein molecules.

Interactive simulations are based on reality-based situations: Scenarios provide better learning opportunities than lectures, static text or videos, and give learners the ability to put knowledge into action. Assessments that make sense: An interactive online training program allows you to assess learner performance spontaneously and non-intrusively. Assessments for interactive courses usually come in the form of decision points for branching scenarios, instead of regular quizzes or tests.

...

Virtual reality (VR) is a simulated experience that can be similar to or completely different from the real world. Applications of virtual reality can include entertainment (i.e. video games) and educational purposes (i.e. medical or military training). Other, distinct types of VR style technology include augmented reality and mixed reality, sometimes referred to as extended reality or XR.
