The Arctic is home to roughly 25,000 polar bears. Scientists have long known that the animals are in danger. This study, which looked at 13 of the world's 19 polar bear populations, is the first to identify when they could disappear. But the study also notes that it is still possible to slow Arctic melting.

Polar Bears in Danger

Polar bears don't eat penguins, but why? To gain such weight, the polar predator needs a lot of protein. Their favorite prey is fish, sea animals, and bird eggs. First of all, the polar bear eats the skin and fat of its victim and (only being very hungry) also eats meat.

Why polar bears don't eat penguins? - Sprintally

No, polar bears do not eat penguins. As an interesting matter of fact, they cant. The reason is distance. Polars bears are 11,500 miles away from tasty penguins and vice versa.

Do polar bears eat penguins? - Emborawild

"Sometimes when you say we have already a temperature increase of two degrees, people say, 'So what?' They don't really relate to a few degrees of temperature. If you say, 'It could endanger penguins and polar bears—they could disappear—people say, 'Oh, maybe two degrees has a huge effect.'
