worn pivot holes, dirt, scoured pivots, scoured pallets, set mainspring etc. A common example of this would be the 8 day clock brought in due to premature stopping. After a good cleaning, oiling, bushing job and replacement of the old mainspring with a new one of the exact same

### Bobs Clock Repair Trouble Shooting Notes

When I took it apart, one of the factory pivot bushings fell out. The other one took a lot of effort. I first tried running a weld bead around the inside of the bushing and waiting for it to shrink after cooling but that didn't work because I burned through the bushing in one spot and tacked it to the housing.

### Repair Instructions Pivot Bushing Replacement

Once again, like the other two methods (prick punching and band-aid bushing), use of the screw-in bushing enables a "repairman" to "correct" a worn area without dismantling the clock. A special tool attaches to the plate and allows a hollow drill bit to cut a hole in the plate around the pivot without removing the pivot.
