Therapeutic Electrophysical Agents 3rd Edition Read ...

Electrophysical agents such as LASER, ultrasound, and extracorporeal shock wave therapy (ESWT) have attracted attention. Low level LASER therapy has been shown to be effective in improving pain levels in the short term compared to control, but only at wavelength of 908 nm (Bjordal et al 2008). There appears to be less conclusive evidence and some contention for or against the use of ultrasound and ESWT in the treatment of lateral epicondylalgia, perhaps because of a lack of specification and ...
