Linear systems are generally easy to understand, so they are found in nearly all basic algebra texts. Given the complexity of life it is surprising, often even to mathematicians, that linear equations in the form of matrices can be used to accurately describe many natural phenomena.

Let  $x$  denote the number of measures of the first class grain in one bundle. Let  $y$  and  $z$  equal the number of measures of the second and third class grains in one bundle, respectively. The word problem can be written mathematically as  $3x + 2y + 3z = 39$ ,  $2x + 3y + 2z = 34$ ,  $x + y + z = 26$ .

Life is not linear. It doesn't always makes sense and expecting a logical progression is folly, especially in the world we live in today. We don't have a set of directions or a secret map that tells us what to do or where to go. Our paths are winding and filled with forks.

## **linear programming | Definition & Facts | Britannica**

Linear interpolation on a set of data points  $(x_0, y_0), (x_1, y_1), \dots, (x_n, y_n)$  is defined as the concatenation of linear interpolants between each pair of data points. This results in a continuous curve, with a discontinuous derivative (in general), thus of differentiability class.. Linear interpolation as approximation. Linear interpolation is often used to approximate a value of some ...
